

Enabling SOI and IoT: An Equipment and Materials Engineering Perspective

Sesh Ramaswami, Applied Materials Inc.

Sesh Ramaswami is in Advanced Products Technology Development at Applied Materials responsible for identifying emerging requirements and developing new equipment and materials engineering capability for devices in CIS, Si-Photonics, RF, Power and MEMS. He is a co-author and contributor of a book published by McGraw Hill, entitled *3-D IC Stacking Technology*. Sesh has 32 years of semiconductor industry experience, with the last 23 at Applied Materials. Prior to Applied Materials, Sesh was at Advanced Micro Devices and National Semiconductor. A holder of ~40 U.S. patents, Sesh has undergraduate and graduate degrees in chemical engineering from Indian Institute of Technology, Kanpur, and Syracuse University, respectively, and an MBA. Sesh is a member of the IEEE and has been associated with the SEMI North America Packaging Committee. He is an active member and volunteer within Rotary International.

He may be contacted at Sesh_Ramaswami@amat.com.
